The Routledge Handbook of Translation and Ethics in this era of globalisation, the use of interpreters is becoming increasingly important in business meetings and negotiations, government and non-government organisations, healthcare and public service in general. This book focuses specifically on the involvement of interpreters in mental health sessions. It offers a theoretical foundation to aid the understanding of the role of interpreters for both interpreters and researchers in this field. The chapters reflect on the detailed analysis of a corpus of translated therapy sessions. The theoretical foundation is thus linked to what actually takes place in this type of talk. Conclusions are then drawn on the feasibility and desirability of certain discussion techniques. Dialogue Interpretation in Mental Health offers insights into the processes at work when two people talk with the help of an interpreter and will be of value to linguists specialising in intercultural communication, health care professionals, interpreters and anyone working in multilingual situations who already uses or is planning to use an interpreter.

Understanding Community Interpreting Services: A glance at the current state of the profession reveals a varied scenario in which Translation and Interpreting often constitute two interlingual processes performed by the same person in the same communicative situation or in different situations within the same set of relations and contexts, at times tacitly linked to other competences and other knowledge, though often seen as a single entity in the eyes of the public at large. Translation and interpreting can thus be found in relations of overlap, hybridity and contiguity, and variedly effective in various professional practices, strategies and translation processes. Yet, translation and interpreting have long been regarded as two separate fields of study. The different denominations of the academic disciplines - Translation Studies and Interpreting Studies - is only one example indicating the scholarly division of the two research areas. Academic references for contact and comparison between specialists in the two disciplines are therefore lacking, even though translation and interpreting scholars would have a great deal to discuss in terms of research, teaching and professional practice. This book aims at filling this gap by providing insights into theoretical and methodological approaches, which aim at integrating translation and interpreting in the same chapter. Each contribution will therefore offer innovative perspectives on T&I in a series of topics going from training methods to identity perception, from English as lingua franca to T&I strategies, from T&I in specific speech communities to the status of interpreters and translators”--

Non-professional Interpreting and Translation Translation, interpreting and other forms of communication support within public sector settings constitute a field which deals, quite literally, with matters of life and death, where an interpreter’s or translator’s role is chrucial in recognizing the rights of vulnerable populations and human rights, diversity and equality legislation shining the spotlight on the need for quality provision across an increasing range and volume of activities. Interpreting in a Changing Landscape 7. Summury and conclusions

Challenges and Opportunities in Public Service Interpreting. This edited collection brings together new research on public service interpreting and translation (PSIT) with a focus on ideology, ethics and policy development. The contributions provide fresh theoretical and empirical perspectives on the inconsistencies in translation and interpreting provision observed in different geopolitical contexts and the often-reported tensions between prescribed approaches to ethics and practitioner experience. The discussions are set against the backdrop of developments in rights-based discourses on language support services and the professionalization of the field, drawing attention to how stakeholders and interpreting practitioners navigate the realities of service in the context of shifting ideological landscapes. Particular innovations in the collection include theorizations about policy and practice that draw on political science, applied ethics and paradigms of trauma-informed care. The volume also presents research on settings that have received limited attention to date such as prison and charitable services for survivors of violence and trauma.

The Critical Link 2

Note-taking for Consecutive Interpreting. At conferences and in the literature on community interpreting there is one burning issue that reappears constantly: the interpreter’s role. What are the norms by which the facilitators of communication shape their role? Is there indeed only one role for the community interpreter or are there several? Is community interpreting aimed at facilitating communication, empowering individuals by giving them a voice, or in wider terms, at redrawing the power balance in society? In this volume scholars and practitioners across different countries discuss these questions, offering a representative sample of ongoing research into community interpreting in the Western world, of interest to all who have a stake in this form of interpreting. The opening chapter establishes the wider contextual and theoretical framework for the debate. It is followed by a section dealing with codes and standards and then moves on to explore the interpreter’s role in various different settings: courts and police, healthcare, schools, occupational settings and social services.

Multicultural Health Translation, Interpreting and Communication. This collection brings together new insights around current translation and interpreting practices in national and supranational settings. The book illustrates the importance of reflection on issues around quality and assessment, given the increased development of resources for translators and interpreters. The first part of the volume focuses on these issues as embodied in case studies from a range of national and regional contexts, including Finland, Switzerland, Italy, Spain and the United States. The second part takes a broader perspective to look at best practices and questions on quality through the lens of international bodies and organizations and the shifting roles of translation and interpreting practitioners in working to manage these issues. Taken together, this collection demonstrates the relevance of critically examining processes, competences and products in current institutional translation and interpreting settings at the national and supranational levels, paving the way for further research and quality assurance strategies in the field. Translation Today

Crossing Borders in Community Interpreting. Empirical research is carried out in a cyclic way: approaching a research area bottom-up, data lead to interpretations and ideally to the abstraction of laws, on the basis of which a theory can be derived. Deductive research is based on a theory, on the basis of which hypotheses can be formulated and tested against the background of empirical data. Looking at the state-of-the-art in translation studies, either theories as well as models are designed or empirical data are collected and interpreted. However, the final step is still lacking: so far, empirical data has not led to the formulation of theories or models, whereas existing theories and models have not yet been comprehensively tested with empirical methods. The publication addresses these issues from several perspectives: multi-method research and process-based research may gain insights into translation as well as interpreting phenomena. These phenomena may include cognitive and organizational processes, procedures and strategies, competence and performance, translation properties and universals, etc. Empirical findings about the deeper structures of translation and interpreting will reduce the gap between translation and interpreting practice and theory. Furthermore, the availability of more large-scale empirical testing triggers the development of models and theories concerning translation and interpreting phenomena and behavior based on quantifiable, replicable and transparent data.
